

DP consultation - Perth and Kinross council

This email has been received from an external party and
has been swept for the presence of computer viruses.

I apologise for the lateness of my response regarding the above consultation and failure to complete the recognised feedback form due to time restraints.

Part of my remit includes the enforcement of the private water supply regulations, incorporating routine water sampling, maintenance of a public register, dealing with enquiries about private water supplies from, for example, wind farms developers etc. I also deal with infectious disease, including waterborne infections arising from private water supplies e.g. E.coli, campylobacter and so on.

From a brief review of the aforementioned document it would appear that the possible impact on public health from diffused pollution and subsequent contamination of water sources such as burns, springs etc by faecal run off, chemical contaminants etc has not been commented upon. It is felt that the risks to public health are also significant to the overall objectives of the document. I apologise if these matters are dealt with in another document, but I could not identify any relevant cross reference material?

Regards

Kirsty Steven
